PROFESSIONAL SUMMARY

Recent B.Tech graduate in Computer Science Engineering with a strong foundation in Python, Full Stack Development. Proficient in Python, HTML, CSS, JavaScript, SQL, and web development frameworks, with hands-on experience in developing academic projects and problem-solving. A quick learner with strong analytical and communication skills, seeking an opportunity to apply technical knowledge and contribute to organizational growth while continuously enhancing professional expertise.

EDUCATION

ACE Engineering College, Ghatkesar *2023 – 2026*
Bachelor of Technology in Computer Science and Engineering (Data Science) CGPA: 8.38

TECHNICAL SKILLS

Languages: Python, JavaScript, HTML/CSS, SQL
Frameworks: Flask, Bootstrap
Libraries: Pandas, NumPy, Scikit-learn, OpenCV, Streamlit
Developer Tools: Git, GitHub, VS Code

PROJECTS

Cast My Vote: Secure Online Voting System through Biometrics
Python, OpenCV, Streamlit, Machine Learning, MySQL, Blockchain

- Developed a secure online voting system using facial recognition and liveness detection to authenticate voters and prevent impersonation, duplicate voting, and unauthorized access.
- Implemented multi-factor authentication (OTP and biometric verification) along with encrypted voter data storage to enhance security and ensure reliable user verification.
- Designed a blockchain-based tamper-proof voting mechanism using cryptographic hashing to guarantee vote integrity, transparency, and auditability of election records.
- Built an interactive admin dashboard for voter management, real-time election monitoring, result visualization, and comprehensive audit reporting.

Smart Meal Planning for Fitness using Machine Learning
Tech Stack: Python, Scikit-learn, Pandas, NumPy

- Developed an AI-powered meal recommendation system that generates personalized meal plans based on users' dietary preferences, fitness goals, and available ingredients.
- Implemented a content-based recommendation engine using TF-IDF vectorization and Cosine Similarity algorithms to analyze recipe datasets and recommend nutritionally relevant meals.
- Built a full-stack web application using Flask, MySQL, HTML, CSS, and JavaScript to provide personalized recipe recommendations and detailed nutritional information, including calories, proteins, fats, and carbohydrates.
- Performed data preprocessing and feature engineering using Pandas and NumPy, and designed a feedback-driven recommendation system to improve recommendation accuracy and support healthy eating habits and fitness objectives.

TRAINING & CERTIFICATIONS

- Python Certification – HackerRank
- SQL Certification – HackerRank

ACHIEVEMENTS

- Solved 100+ coding problems on LeetCode.
- Earned a Gold 5-Star badge in Python and a 2-Star badge in Problem Solving on HackerRank.
